Creating New and Better Nursery Values For More Than Fifty Years

A Personal Message From J. B. Baker

THE past season has been an unusually good one for the growing of Nursery Stock in the vicinity of Fort Worth. Weather conditions have been favorable and almost all varieties of plants have thrived and made a luxurious growth.

We have an abundance of plants in the medium grades, due to the fact that we have continued our plantings each year for the past several years and have endeavored to maintain a well balanced stock. We also have a variety of specimen plants in the larger grades that are well shaped and well balanced plants. Our more than fifty years experience in creating new and better nursery values is your assurance of handsome, vigorous stock.

Fruit Trees and Roses. The Peach trees offered were grown in our Nursery in Fort Worth and are beautiful, well shaped trees. Our roses are grown on contract in East Texas and are budded on Multiflora Japonica understock.

Not only is Fort Worth a favorable place in which to grow stock,

but it is located in the center of a vast territory that can be reached easily and quickly. Shipment by freight or truck can be made overnight to most points between Fort Worth and Houston or San Antonio on the south; Shreveport on the east, most of Oklahoma points on the north; and Amarillo, Midland and San Angelo on the west. We have plenty of large trucks and can make quick delivery. This is usually the best way to handle stock to points within 400 miles of Fort Worth.

We have a Nursery in Lubbock, Texas, for the benefit of our customers in North West Texas. We have a complete line of stock for sale there and invite our customers in this territory to visit the Nursery. The Nursery is located two miles south of Lubbock on the Slaton Highway.

President, BAKER BROS. Nursery

Wholesale Price List
BAKER BROS., NURSERY
FORT WORTH, TEXAS

TERMS:-

2% 10 days—1% 30 days—60 days net. Packing extra at cost.
Packing free in carlots. Truck loads delivered within a radius of 300 miles at cost. This is a very satisfactory method of handling stock.

24-30 in.	.85	.70	.60
30-36 in.	1.00	.85	.75

BIOTA, Excelsa:

Valuable for its compact form, as well as being hardier than the other Biotas. In Oklahoma, Kansas, and other Middle Western States it stood the cold weather in fine shape, where Berckman's, Bonita, and other Biotas were either damaged or killed outright. At Carlsbad, N. Mex., it stood 30° below zero without injury.

18-24 in.	\$.60	\$.45	\$.40
2-3 ft.	.80	.70	.60

*Cedrus
Deodara*

A specimen plant growing in the yard at Mr. and Mrs. J. B. Baker's home. We have several hundred of these choice evergreens in the field. They are well spaced and range from 2 feet to 10 feet.

	Each	10	100
3-4 ft.	1.00	.90	.80
4-5 ft.	1.25	1.10	1.00
5-6 ft.	1.75	1.50	1.35
6-7 ft., heavy	3.00	2.50	2.00

BIOTA, Golden Ball:

15-18 in.	\$.65	\$.50	\$.40
18-24 in.85	.70	.60
24-30 in.	1.00	.85	.75

BIOTA, Mayhew's:

30-36 in.	.75	.60	.50
3-4 ft.	1.25	1.10	1.00

BIOTA, Springdale:

An old variety introduced by us several years ago. Very hardy, dark green and more slender than the Baker's Arbor Vitae. During the past seasons our plants were not injured by the extreme cold as were some of the less hardy varieties. An ideal plant for narrow places as it can be sheared very nicely.

3-4 ft.	\$.75	\$.60	\$.50
4-5 ft.	.85	.70	.65
5-6 ft.	1.25	1.10	1.00

3-4 ft.	1.00	.85	.75
4-5 ft.	1.25	1.10	1.00

CYPRESS, Italian Worthiana:

Very superior strain of symmetrical upright growth, and much hardier than other cypresses. The parent tree on our grounds is twenty years old and has never been injured by cold when all other specimens were either killed outright or severely damaged by the severe cold spells we have had every four or five years. Young plants propagated from this stock were uninjured in the field while other stock was killed. Every tree is handsome and uniform in its growth.

2-3 ft.	\$.80	\$.65	\$.50
3-4 ft.	1.00	.85	.75
4-5 ft.	1.25	1.10	1.00
5-6 ft.	1.50	1.35	1.25

*Italian
Cypress
Worthiana*

This plant has proven to be harder than any other strain of Italian Cypress. Besides the block shown, we have hundreds of smaller trees ranging from 2 to 4 feet.

HEDGE PLANTS

See Ligustrum, Amurense (Amoor River).

See Ligustrum, Nanum Compactum (Lodense).

A Word About Our Rooted Cuttings

The plants listed below as rooted cuttings, are not what is usually understood by this term, but are really strong vigorous plants ready for the open field. By our own novel process of propagation these cuttings often attain a growth of six to eight inches in height with a mass of healthy brown roots six to ten inches long. These may be planted directly to the field without the labor, expense and loss of time by the old method of growing them in beds or pots. We have been growing them ourselves in this manner for many years, as have also many of our customers. One of the largest eastern nurserymen bought a few thousands of the plants several years ago, and has been buying in ever increasing numbers each year since. Last year we sold him 35,000 plants, have his order for 35,000 for delivery in the spring of 1936 and a like number for the spring of 1937. Another grower in the East bought a few thousand in the spring of 1934, 10,000 last spring, and we have his order for 20,000 for delivery this coming spring. Our trade in this class of stock has grown so steadily that we are growing 600,000 this season. This is in addition field grown young plants, many of which we sell for lining out purposes.

Lining out stock quoted on following pages.
